

Impact Journal 2025

DeKKo BHD Group
Sustainability Disclosure

Welcome to **Impact Journal 2025**,
Deloitte KPMG Group's sustainability report.

This report covers the full calendar year from January to December 2025 for environmental and social data, fiscal year 2025-2026 for economic data offering a transparent overview of our ongoing sustainability performance and strategic priorities.

We uphold the highest standards of integrity and accountability by presenting both our accomplishments and the areas requiring further improvement with equal candour and commitment to continuous progress.

**Elevating
Excellence**
since 1953

From the Desk of the Honourable Chairman

Dear Stakeholders,

In my recent letter to **IFMC Group's** **Impact Journal 2024**, an emphasis is placed on the progress we have made and the journey that lies ahead. Throughout 2024, we will continuously share our impact on the environment, society, governance and economy, both positive and negative, so we continue our journey toward delivering high-quality products and ensuring sustainable growth.

In our organizational culture, it goes without our responsibility toward our people, our stakeholders, global planet, future, around 50,000 talented employees and our investors in the success of our organization, and their well-being, and the highest priority. At **IFMC Group**, we recognize that our success is deeply connected to the well-being of our people, the communities around us, and the environment we live in.

As a global manufacturing organization, we understand the impact our industry has on environmental resources and the environment. Throughout 2024, we continued to advance our sustainability efforts through responsible resource management, environmental stewardship and waste reduction initiatives, and innovative technologies. Among our key achievements, we reduced our Scope 1 emissions by 30% while significantly increasing our renewable energy sources. Looking forward, we remain committed to further reducing our greenhouse gas emissions and strengthening our sustainable manufacturing.

Furthermore, we continue to uphold high standards of workplace safety, employee well-being, training and development, ethical business conduct, and social responsibility. Through ongoing engagement and dialogue, we strive to better understand the needs of our employees, who are not just part of our workforce but valued members of the **IFMC family**. We also remain committed to supporting the communities in which we operate through ethical collaborations.

While we are proud of the progress we have achieved, we recognize the increasing challenges of climate change, resource scarcity, and evolving stakeholder expectations. However, we view these challenges as opportunities to build a stronger, more resilient, and future-ready organization.

Michael, at the Board and Management level, I sincerely express gratitude to our employees, customers, suppliers, business partners and other stakeholders for their continued support and trust. Together, we are building a future that creates value responsibly, grows sustainably, and contributes positively to our customers and local community.

I thank you for being part of this journey.

”

Our efforts extend beyond business performance, focusing on creating opportunities, strengthening communities and fostering shared growth.

M. Shahid Hossain

Chairman, Delta **■** IFC Group

Organizational Governance

Driving Ethical Leadership

Role of Leadership in Managing Environmental, Social and Economic Impacts

The Executive Committee is responsible for defining, approving the company's overall strategic direction, including the development and execution of business and sustainability strategies. This oversight encompasses key sustainability areas such as greenhouse gas emissions, water management, waste reduction, chemical use, material sourcing, workforce welfare, and supply chain impacts.

Along with this responsibility, the Executive Committee designs the development and implementation of the sustainability strategy, the Corporate Sustainability Team. This team leads the execution of sustainability initiatives across all Strategic Business Units (SBU), monitors performance, reports progress, and ensures the organization is prepared for emerging sustainability challenges. Regular updates on sustainability performance and initiatives are communicated to the Executive Committee and are included in their report.

Each SBU plays a critical role in assessing and prioritizing sustainability impacts based on their significance to operations. It also establishes an accountability for managing specific sustainability projects, collecting and monitoring data, and leading efforts that incorporate sustainability into environmental, social, and governance (ESG) implementation of sustainability objectives.

Our Sustainability Policies and Governance Approach

At Orica, E-H-O Group, strong governance and responsible policies form the foundation of our sustainability journey. We integrate environmental stewardship, social responsibility, and ethical business conduct into every aspect of our operations through a comprehensive policy framework that guides decision-making, risk management, and continuous improvement.

Environment	Social	Governance
Environmental Management System Policy Energy Policy Water Policy Air Policy Waste Management Policy Chemical Management Policy Chemical Purchase Policy GHG Management Policy HSE & LHA Management Policy	Human Rights Policy Labor Practices and Employee Welfare Diversity, Equity and Inclusion Policy Health and Safety Policy Training and Development Policy Talent Acquisition Policy Ombudsman & Grievance Policy	Code of Ethics and Business Conduct Risk Management Policy Compliance and Management Policy Supply Chain Governance Policy Quality Policy

Stakeholder Engagement: Building Trust Through Meaningful Dialogue

At **Indus**, we believe that meaningful stakeholder engagement is essential for sustainable growth. By actively listening to and collaborating with our key stakeholders, we identify emerging opportunities, address material impacts, and co-create innovation that supports long-term sustainable growth.

We engage with diverse stakeholder groups through tailored approaches, including regular communication and ongoing transparent two-way dialogues and channels. Our engagement is guided by principles of transparency, respect, inclusiveness, ensuring that stakeholder voices inform our decision-making, risk management, and sustainability strategies.

Stakeholder Group	Engagement Frequency	Engagement Mechanisms	Key Materialized Focus Areas
Employees	Regular	Email Communication Meetings and Working Sessions Internal Intranet Portal (iHub) Staff Feedback Surveys Compliance/Suggestion Box	Career Advancement and Skill Development Recognition and Performance Evaluation Empowerment, Workplace Safety, and Health Continuous Education
Supply Chain Partners	As needed	Supplier Meetings and Events/Forums Regular Interactions Ethics, Social and Managerial Material Business process Agreements	Building Capacity for ESG Compliance Regulations in Extended, including Pricing, Quality and Order Management Updates on Digital Management Systems and Digital Transformation
Customers	Regular	Surveys & Voice of Customer Supplier Audits Events/Forums Work Meetings Social Media and Digital Communication	Compliance with Customer Code of Conduct Aligned with ESG Objectives Quality Improvement and Pricing Innovation for Customer-Centric Experience
Government Authorities	As needed	Email Communication Representation Industry or Trade Forums and Conventions	Adherence to legal and Regulatory Standards Using Corporate Governance, Environmental Protection, Management for Workers and Community Development Programs aligned with Government together

Walls	As needed	Face-to-face Meetings Virtual Engagement Activities Phone and Email Platforms Micro Video-mediated Engagement Collaborative Programs	Implementation of Community Development Programs Community-Specific Initiatives Addressing Key Needs Effective Monitoring and Evaluation Systems for Continuous Improvement
Communities	As needed	Focus Groups and Key Informants Community Workshops Networking with NGOs	Specific Interventions for Targeted Development Interventions Programs for Social/Educational/ Economic Empowerment Scaling Programs for Small Underserved Populations

Environmental Responsibility

From Compliance to Value

Environmental Management System

The Impact: From Policy to Performance

At Orica, we believe that sustainability is a business, not a passion. To ensure our operations remain a long-term force for environmental responsibility, we embed central sustainability to our work and put ESG at the heart of our strategy. This strategy, combined to international standards provides a framework, "Plan-Do-Check-Act" meaning that employees are leading to manage environmental aspects with sustainability.

Our ESG report provides the management structure, our commitment to the UN Sustainable Development Goals and a list of material issues. To meet this need, we implemented the ESG report standard for the sustainability responsibility of businesses like Orica, and we are committed. By aligning our strategy with ESG, we have established a high degree of control that allows us to track our performance with greater precision. This data-driven approach, combined with environmental management, specific action, ensuring ensure that our performance is transparent and measurable.

Energy Management and Performance

Energy Use Breakdown

Energy efficiency and sustainable energy management are priorities for Orica. ESG report and its commitment to sustainable manufacturing and environmental stewardship. The Group operates the production and distribution facilities and our manufacturing facilities, where energy consumption depends on operational processes.

Our internal assessment indicates that approximately 75% of total energy consumption occurs in heating operations, while the remaining 25% is used in cooling operations due to the higher thermal and electrical energy requirements associated with heating, drying, and freezing processes. To manage this demand effectively, the Group continuously monitors energy consumption and implements ongoing initiatives to optimize efficiency and reduce environmental impact.

Clean Energy Initiatives

In pursuit of transition toward clean-energy, GlaxoSmithKline Group has spearheaded various renewable energy sources in manufacturing units, as in 2019, solar photovoltaic (PV) systems have been installed at several facilities, including 1.7 MW at Glaxo-Somerville, NJ, 4.0 MW at Glaxo Madison, NJ, and 20.0 MW at Glaxo Carlsbad, CA. The organization has set an ambitious target to achieve 100% clean electricity by 2025 through combination of solar energy exposure, **International Renewable Energy Certificate (I-REC)** and renewable energy efficiency measures.

Further initiatives include 1 MW solar installation at the extended unit at Glaxo Somerville, NJ, by 2020, a 100 MW solar facility study for AgapioPharma, Inc, and again Mustang, CA, and another 100 MW solar installation at Glaxo Somerville, NJ, and Glaxo Madison, NJ, by 2020. In addition, the Group has achieved 15,422 tons of **Carbon** credit, contributing significantly to the reduction of indirect energy consumption and supporting the transition toward greening electricity.

Energy Saving Measures

Shiga City Group has adopted various energy efficiency measures to improve operational performance and reduce energy consumption across its facilities. These measures include:

- Installing natural daylight utilization technologies in lighting systems
 - Installing variable frequency drive (VFD) for compressors
 - Using energy-efficient technologies, incorporating conventional machinery with energy-efficient components (existing machines)
 - Installation of boiler economizers
 - Installing heat exchangers optimized commercial usage
 - Replacement of conventional pumps with high-efficiency fans
 - Implementation of waste heat recovery systems
- Use of Internet of Things (IoT) support in the group's efforts to adopt cleaner energy sources.

Through the integration of renewable energy and the implementation of energy efficiency measures, Shiga City Group has achieved significant results with its efforts. In 2025, the Group successfully reduced approximately 50% of its Scope 2 greenhouse gas emissions, demonstrating strong progress toward its vision and sustainability commitments.

Energy Intensity Performance

Table 10.10 Group regularly reviews energy-intensity across manufacturing facilities across operational efficiency and identify opportunities for continuous improvement. Monitoring energy intensity allows the Group to proactively manage effectively energy resources and related risks to production output and operational activities.

During the reporting period, energy intensity varied among facilities due to differences in operational processes, production volume and the nature of manufacturing activities.

Energy Intensity (kWh/Pl) Through Facilities (2022-2024)

In 2024, energy intensity trends across most of manufacturing facilities across different facilities. During, Delta Resources Limited reduced its energy intensity from 14.5 in 2023 to 10.0 in 2024, while Delta Resources Limited increased from 14.5 in 2023, following the positive impact of energy efficiency measures and operational optimization initiatives. However, some facilities experienced higher intensity levels due to increased production output and process specific energy requirements and equipment. For example, Agni Facilities Limited and Agni Mining conducted higher energy intensity at sites, reflecting the energy characteristics of their operations and production scaling and equipment upgrades used.

Future Strategy

Looking ahead, the organization is also pursuing the capability of better Energy Storage Systems (ESS) enhance renewable energy utilization and strengthen energy resilience. By continuously monitoring energy performance and investing in sustainable technologies, Enbridge Energy Group remains committed to improving energy efficiency and supporting long-term global sustainable growth and innovation.

GHG Emissions Analysis

Enbridge Energy Group is committed to transparent reporting and continuous reduction of its greenhouse gas (GHG) emissions. The Group monitors and reports Scope 1 direct emissions from fuel combustion activities, primarily fuel combustion at boilers, generators, and vehicles, and Scope 2 indirect emissions from purchased electricity in terms of CO₂e, equivalent CO₂e.

Emissions Intensity (CO₂e/MWh)

Scope 2 emissions/purchased electricity showed a dramatic 75% reduction from 888 CO₂e in 2020 to 222 CO₂e in 2023. This substantial decline is primarily attributable to the procurement of 10,000 MWh of P-PHC certificates in 2020, combined with increased renewable energy generation (hydroelectric capacity) and energy efficiency initiatives across the system.

Scope 1 emissions/purchased electricity decreased from 1,000 CO₂e in 2020 to 1,000 CO₂e in 2023, reflecting operational expansion and higher thermal energy demand for power generation. P-PHC CO₂e in 2020 was a 100% increase from the prior year.

Adopting Science-Based Target Indicators

[illegible]

Water Resource Management and Efficiency

Water isn't just a resource; it's a lifeline. Managing it wisely is the fastest way to ensure a sustainable future. Our water, wastewater, and stormwater teams work together to protect our water, to ensure that every drop is used wisely, and to ensure that every drop is treated properly. We're committed to ensuring that every drop is used wisely, and to ensuring that every drop is treated properly.

Water remains our biggest water stress. While we've made significant progress, there's still a long way to go. The solutions we've implemented are a mix of technology, policy, and community engagement, all aimed at ensuring that every drop is used wisely, and to ensuring that every drop is treated properly.

Water Consumption Across Facilities (m³)

Rainwater Utilization

At Deika Garments Ltd., we recognize that water is one of our most precious shared resources. To mitigate our groundwater dependency and enhance our climate resilience, we have prioritized Rainwater Harvesting (RWH) as a cornerstone of our environmental strategy.

Our Progress: Deika Garments Ltd.

We have actively scaled-up Rainwater harvesting businesses and our understanding towards climate change impact.

New Climate Action Milestones

Water Intensity Performance

Our continuously-improved environmental water strategy across key operational categories focuses responsible resource management and alignment with global best practices. By reducing the footprint footprint of our operations, we strengthen sustainability, efficiency, and resilience long-term operations and sustainable value creation.

Water Intensity-2023 (GWT) m³/person

Water Intensity-2023 (Manufact) m³/Pcs

Effluent Management

Rain and effluents are managed and stored on-site within above-ground storage tanks – treating industrial effluents through the ETP and reusing treated water from ETP and GWT P for various freshwater dependencies and various discharge permits.

Key Initiatives/Details

Water treatment of process effluents via 100-m³/day Chemical ETP.

Advanced treatment and reuse of wastewater streams from ETP via Ultra-Clean™ Ltd 11.5 m³/day Ultra Filtration (ultrafiltration) system. Re-treated produce water recycling system for the and Delta Reclamation Limited 2 m³/day and GWT Reclaim Water Systems Limited 5 m³/day. Agglomerators (ultrafiltration) and ultrafiltration and Delta Reclamation Limited 2 m³/day provide additional water recycling of water.

Wastewater management in treatment efficiency, as evidenced by the 95% reduction in the proportion of treated water relative to total treated volume in 2020.

Key Performance Data

Wastewater Treated from ETP (m³)
This represents the amount of industrial effluent processed through the Effluent Treatment Plant.

Wastewater Recirculation Treatment from ETP (m³)
Recirculation of treated volume downstream that is 100%, 100%, 100%, 100% 100%, 100% 100%.

Wastewater Recycled after Treatment from ETP (m³)
Recirculation of treated volume downstream 100%, 100%, 100%, 100% 100%, 100% 100%.

From Optimization to Elimination: Our ZLD Journey

Agree Watering Limited is achieving a strategic initiative to achieve Zero Liquid Discharge (ZLD) by 2025 as part of its process water optimization strategy. Through ongoing feasibility assessments, process optimization efforts/technology investments, process water recovery in our laundry operation, minimum freshwater consumption, and ultimate wastewater discharge, this initiative represents a profound, long-term commitment and environmental stewardship. While technically complex, these rapid discharge have presents an opportunity to strengthen operational efficiency and sustainability performance. With focused investment, cross-functional collaboration, and continuous improvement, Agree Watering Limited aims to establish a robust, long-term water management system aligned with operational practices.

Waste Accountability

The organization's primary responsibility and commitment extends across its manufacturing and support operations. Waste is systematically managed according to its characteristics, either based on segregated processes, safe handling, and responsible disposal or recovery it through the waste management hierarchy.

Waste Type	Hazardous Waste	Non-Hazardous Waste
Cutting	Residual & Residue Waste	Cutting fluids, sludge, waste, fabric, polishing, paint
Assembly	Residual & Residue Waste	Cotton thread labels, fabric, synthetic thread, pins
Finishing	Residual & Residue Waste	Cotton thread, cotton, labels, needles, pins, needles
Machine Waste	Spindles, empty machine bottles, synthetic packaging	Ground cotton, grain
Cleaning	Residual waste	Food waste, plastic bottles, water bottles
General Waste	Oil cartridges	Waste, poly, waste
ESP Lab	Integers, expired chemicals, empty containers	Waste, waste, waste
Chemical Store	Chemical drums, expired chemicals, empty containers (except PPE)	Broken glass
Residual & Residue	Residue from spins, oil spins, fabric, labels, labels, labels	No significant non-hazardous waste
ESP & ESP	Spins, waste PPE, chemical empty (poly)	No significant non-hazardous waste
Maintenance / PM	Chemical Empty Drum, Residual waste, Run Oil	No significant non-hazardous waste

Performance Highlights 2023-24-2024

During the period from September 2023 to December 2024, our comprehensive efforts of waste work through this platform, 1 tonne worth of waste from 824 University Students, with 402 boxes of waste was received, demonstrating a substantial scaling of our circular initiatives.

At UoM, we actively encourage cutting waste from disposal by donating their production waste and recycling items. Through partnerships with local informal agencies, clean cutting waste generated from our partners production processes is transformed into useful materials of quantity for some specific manufacturing industries.

Management of Other Waste Streams and Hazardous Waste

Lastly, we managed and recycled 1 tonne of waste paper through various channels, contributing to resource conservation and reduced demand for virgin pulp.

Using paper bags are replacement for single-use plastic alternatives.

Manufacturing of recycled cartons for storage printing and documentation.

For hazardous waste, we utilized safe handling of and transporting an quantities from the 10L, 40L, 400L, and 200L facilities. This process will end with neutralization with reducing energy and toxic wastes associated with steps of production.

During 2023, 100 boxes of EPP sludge hazardous by-product was sent through our partner company to dedicated authorized disposal channels until compliance with regulatory requirements.

We have formalized our commitment to separate hazardous waste handling by entering into agreement for the waste Recycling to improve with authorized suppliers. This ensures compliant collection, treatment, and transportation of hazardous waste generated from operations, including fuels, batteries, cables, and other electrical items.

Source to Recycle: A Closed-Loop Circularity Initiative with Ralph Lauren

at Ralph Lauren, we are pioneering strategic partnerships through meaningful collaboration with our brand partners. A flagship example of this commitment is our Source to Recycle initiative with Ralph Lauren, designed in partnership with our third sustainability target.

Under this program, offcuts/waste generated during the manufacturing of Ralph Lauren products at our facilities is systematically collected and diverted from disposal. If the waste is suitable for reuse at another National Composite Facility, where it is processed into high-quality recycled yarn. The recycled yarn is then used to produce recycled fabric by Aquafil SpA, which is then returned to the Ralph Lauren supply chain for the creation of new garments.

What makes this initiative truly impactful is its complete closed-loop design: the waste generated from Ralph Lauren's production is recycled and transformed into new materials within the same RL supply chain. This process drastically reduces material inputs, and significantly reduces the emissions origin from manufacturing waste sent to landfill.

By successfully closing the loop from "source to recycle," we are not only supporting Ralph Lauren's ambitious circularity goals but also demonstrating how responsible manufacturing can create a regenerative space in the fashion industry. This initiative stands as a testament to our dedication to create genuine positive impact while driving sustainable growth together.

Flexstar: Closing the Loop from Garment Waste to Carbon-Saving Packaging

■ 2024 Carbon **■ EcoGroup** established Flexstar, a petrochemical-free startup dedicated to converting textile and fabric waste into high-performance, carbon-negative packaging solutions with top performance, fully compostable packaging.

Flexstar transforms 100% of textile waste from landfill each year into 100% bio-based. This includes an average 25-30% reduction in CO₂ footprint and 10-15% reduction in weight. CO₂ footprint, waste byproducts, environmental footprint, and 100% compostable packaging solutions, including biodegradable bags, biodegradable and organic bags, biodegradable films, biodegradable films, biodegradable films, and biodegradable films. Flexstar's 100% bio-based packaging solutions are made from 100% bio-based materials, fully biodegradable and 100% compostable within 180-day under industrial composting conditions.

The petrochemical-based is fully qualified, biodegradable, and biodegradable, with 100% of CO₂ emissions, compostable, biodegradable, and 100% compostable. The results in a significant 100% of CO₂ emissions, biodegradable, and 100% compostable. The results in a significant 100% of CO₂ emissions, biodegradable, and 100% compostable.

Flexstar is certified to the highest international standards, including ISO 14001, ISO 9001, and ISO 13001, and is a member of the International Standards Organization (ISO). Flexstar's 100% bio-based packaging solutions are made from 100% bio-based materials, fully biodegradable and 100% compostable. The results in a significant 100% of CO₂ emissions, biodegradable, and 100% compostable.

Nature's Engine: Sealing Circularity Through Grassroot Bioconversion

Grassroot efforts are cornerstones of the **2030 Circular Economy Strategy**, transforming waste-waste-challenges into regenerative industry-solutions. By leveraging the bioconversion power of fungi (such as **F-1001** series), microorganisms, and enzymes, thousands of organic food waste daily inputs, generating approximately 600,000 pounds of high-quality organic material from local facilities. This biological engine achieves a 90% waste reduction of up to 100, effectively decoupling industry growth from waste generation.

The output of this process is **high-value mushroom**, the facility under the wing of **perennating** **nutrient** **recycling**, integrating a **profit-loss** **model** that ensures sustainable alternative to traditional business. By generating up to 10% of **revenue** **from** **the** **local** **market**, **Grassroot** **divides** **the** **biological** **process** **on** **unwashed** **market** **ecosystems**, **maximizing** **the** **biological** **process** **on** **unwashed** **market** **ecosystems**. This shift toward low-carbon fermentation and resource efficiency demonstrates a **holistic** **approach** to **local** **growth** **and** **resilience**, proving that responsible business can drive the **growth** **and** **resilience** **of** **communities**, **driving** **growth** **and** **resilience** **of** **communities**.

Future Circular Initiatives

To further strengthen circularity and prevent waste at source, we are implementing the following initiatives across our facilities:

- Transition from plastic water bottles to reusable glass bottles and adoption of reusable food containers.
- Partnership program targeting empty pharmaceuticals, sheets, pills, and containers.
- Enhanced management of organic waste through improved composting and partnerships with local bioconverters.

Material Sustainability

Resourcing the Future: The Strategic Evolution of Our Material Portfolio

At **Infineon**, we recognize that true industrial decarbonization begins at the material level, within the flows that define our products. We have engineered procurement strategies that systematically replace natural resource-intensive inputs with advanced, high-performing sustainable alternatives. This transformation marks a pivotal step toward **Infineon's** goal of net-zero value chain emissions by 2030, with our latest fiber optics and silicones from sustainable sources, effectively reducing emissions by 10%.

Types of Material		
Renewable	Sustainable	
Renewable Source	Key Source	Material Type
Carbon	Biogenic Carbon	Carbon Fiber
Aluminum	Recycled Aluminum	Aluminum Foil
Steel	Recycled Steel	Carbon Fiber
Plastic	Bioplastic	Bioplastic
Glass	Recycled Glass	Optical Fiber
Resin	Recycled Resin	Optical Fiber
Concrete	Recycled Concrete	Concrete
Insulation	Recycled Insulation	Insulation
Wire	Recycled Wire	Wire
Weld	Recycled Weld	Weld

This shift is achieved by integrating sustainable practices into **Infineon's** supply chain, from raw material extraction to final product assembly. By diversifying our portfolio with **Infineon's** and expanding our circular supply chain through **Infineon's** and **Infineon's**, we are not only reducing our carbon footprint but also ensuring the long-term viability of our operations. Through the strategic use of sustainable materials like **Infineon's**, **Infineon's**, and **Infineon's**, we are transforming our material selection into a powerful engine for regenerative growth and resource resilience.

Top 5 Sustainable Materials Sectors

Advancing Sustainability Through Higg FEM Performance

In October 2024, H&M Group, as a member, has recognized that sustainability is not just about compliance, it's about creating long-term value for people, planet, and prosperity. Guided by the Global Reporting Initiative Standards, we are committed to transparent disclosure of our environmental and social performance. One of the key tools we use to measure and improve our impact is the Higg Facility Environmental Module, which provides a standardized framework to assess and enhance performance across our facilities.

In 2024, H&M achieved significant progress in its overall Higg FEM score compared to 2023, demonstrating our commitment to CO₂, SO₂, HFL, HML, HRL, and HPL as demonstrated measurable improvements.

FEM Score (%)

Driving Green Manufacturing Excellence: H&M's 2025 Environmental Targets

By 2025, H&M Group's H&M's has committed to comprehensive implementation of the Green Manufacturing Project by 2025, ensuring all strategic aspects including GHG, resource efficiency, waste reduction, water usage, recycling, chemical management, and more are achieved by implementing order treatment plans, Group Treatment Plans, City/Cluster Treatment Plans, preferred waste disposal methods exceeding 40%, and obtaining other international certifications such as ISO 14001 and ISO 45001.

In 2024, with the Higg FEM ISO certification, we report achieving 85% overall Green Manufacturing Index for H&M, contributing to progress and reinforcing H&M's commitment to sustainable manufacturing.

Operationalizing the Ralph Lauren Decarbonization Roadmap

In our pursuit of transparency and alignment with global standards, we have initiated the Ralph Lauren Sustainability Strategy as a cornerstone for our values about performance. For the latest reporting period, our Environmental Sustainability Data Module verification project, the results of our rigorous assessment have already contributed to comparing third-party data against established baselines, a first—very valuable for integrating transparency into our Sustainability Engagement framework, assessing institutionalized performance, and models that translate specific reduction targets, ensuring our decarbonization strategy remains aligned with global climate goals.

In 2024, we successfully met the rigorous performance criteria set by the Ralph Lauren Carbon Target Modeling Initiative. By optimizing our energy consumption and operational efficiency, we achieved 10% reduction in carbon emissions compared to our baseline. Furthermore, our commitment to transparency was solidified through a "High Data Confidence" rating, confirming that our full-year 2023 energy data is fully auditable and trustworthy. These results strongly contribute to our standing in the fashion industry's transition towards net-zero, reinforcing our position as a high-performing partner in the global transition to a sustainable future.

Elevating Industrial Efficiency through the BESTSELLER PACT+ EMV Programme

In 2024, at LAC Group, our sustainability mission is defined by a transition from baseline emissions to net-zero performance, a commitment that began in 2022. Through the successful completion of the first-year BESTSELLER PACT+ EMV Programme, we have achieved significant progress in reducing our carbon footprint. Through precise technical interventions, including lighting, energy, cooling, and the installation of advanced steam recovery systems, we have fundamentally decoupled our production growth from our environmental footprint.

The programme has achieved a 10% reduction in energy consumption, a 10% reduction in CO₂ emissions, and a 10% reduction in water consumption, resulting in a 10% reduction in total energy consumption. Additionally, the programme has contributed to water management, reducing a single by 10% using a water consumption reduction strategy. It has also resulted in a 10% reduction in energy usage, a 10% reduction in water usage, and a 10% reduction in total energy usage. These reductions were a direct result of the PACT+ water, proving that through precision, partnership, and persistence.

Accelerating Environmental Transformation with | edifice

In 2024, our facility's environmental strategy is substantially aligned with regulatory requirements and our Supply Chain Environmental Transformation Plan 2022-2024. This approach has successfully implemented numerous efficiency and sustainability performance initiatives, achieving a 10% rating in EHS and "Excellent" performance in water stewardship, with water consumption reduced by 10% per unit of production through continuous process optimization.

A comprehensive decarbonization assessment was conducted by | edifice Climate in 2024, providing critical insights into our environmental reduction targets. 2024 regular quarterly audits and continuous monitoring, we are now regularly progress, transparency, and long-term sustainability performance of operations.

People and Community

From Policy to Empowerment

Our Human Capital

Behind every 2020, every innovation, and every milestone at Intel, our Group stands on the shoulders of our employees.

In fact, 85% of our workforce are factory workers. The specialized talent of our technicians, manufacturing technicians, engineers that make our world, their daily commitment to excellence through professional growth and continuous learning is the backbone of our success. We are committed to providing a safe and healthy work environment for our employees, supporting their career growth and ensuring their well-being through continuous learning and development.

Total Number of Employees

Employees By Factory

Intel Group's workforce reflects a balanced commitment to diversity and inclusion. Women make up 57% of all employees, with representation rising from 55% in 2018 to 57% in 2020. This growth is a result of our commitment to the inclusion of equitable hiring practices, supportive workplace policies, and a culture that values equality and diversity.

Gender Composition in 2018

Gender Composition in 2019

Gender Composition in 2020

Over the past five years, Delta **INC Group** has demonstrated a steady trend toward greater maturity and stability. The product segment has fully matured, while the price and volume growth has been steady to low-mid-single-digit volume. Meanwhile, a small but meaningful increase among employees has helped add diversity, inclusiveness and great leadership.

Employee By Age Group

New Hires & Turnover: A Story of Balance and Stability

Every year, new hires join the Delta **INC Group**, and others leave the company. This balance reflects a steady influx of opportunities, individuals, and talent for every individual's journey.

During the past five years, 1,718 new members joined the organization, bringing fresh energy, ideas, and skills into the Delta **INC Group** family. The employee turnover rate for the period was 10%, reflecting stable workforce retention provided within operations dynamics of the steady-state growth model.

New Hires & Turnover (Male)

New Hires & Turnover (Female)

Gender Balance in Motion

Over the past three years, hiring and departure at Delta **INC Group** have remained remarkably balanced between women and men. In the male count requiring past, women actually outnumbered departing new hires, which reflects the approach, inclusive environment approach that drives down equity.

Women now follow steps of parity. The number of women departing the organization was only slightly higher than that of men, aligning with entry into positions that include women, career shifts, and regional labor mobility. Despite these natural fluctuations, the overall gender distribution of the workforce stayed very equal, underscoring the Delta **INC Group's** commitment to fair opportunity at every stage, inclusive to all.

Generational Transitions

Japan needs a complementary narrative. The majority of executives in the manufacturing sector were under thirty years old, bringing vitality, adaptability, and fresh perspectives to the industry. Last and not least also, a significant number also joined with foreign skills and age bracket, adding experienced hands to various workforces. Future strategic initiatives should not shy away, contributing towards balanced and effectiveness.

Success followed a similar generational pattern. The largest share here occurred among the under thirty group, typical of the greatest talent as young workers capture strategic opportunities early in their careers. The fifty-plus age group saw moderate success, reflecting changes, particularly evident among mid-career employees. Very substantial individuals saw growth, highlighting the long-term deep institutional culture of the sector rather.

Executive & Success by Age Group

Labor-Management Relations: Rooted in Law, Guided by Respect

Japanese **Partnership**, the relationship between management and workers is not merely a matter of policy. It is a living commitment to fairness, transparency, and mutual dignity. This commitment is anchored in the *Minamoku* Labor Act, which provides a strong legal foundation for every stage of the employment process.

When permanent worker's employment concludes for reasons other than dismissal, the law requires employers to act with transparency. A notice period of 30 days for monthly paid permanent workers and 60 days for other permanent workers ensure that no one is left surprised, transparently negotiating the parameters of future, offering flexibility while honoring the worker's right to transition with dignity.

Second notice, before workers' compensation mechanisms 30 days' wages for non-completed year of service for any participating in benefits. For others are without the loss of termination, leaving no financial loose ends. For workers who choose to resign, a 60-day notice provides comprehensive transition and next steps.

Japanese **Partnership**, these legal processes are not treated as mere checkboxes. They are embraced as the backbone of ethical practice. Every notice period, every transition, every employment at the time of being, without system engagement and respect. Because the future is possible for all, and regular management worker compensation matters but for factory floor and the most often overlooked by them, but dignity.

Before any individual joins the evidence, age is verified through documented evidence (like registration certificates, school certificates, or medical certificates) or by registered practitioners. In a large-scale age survey, the sampling frame should also include the truth. Every adolescent reported should be identified and those identified who is eligible for completion must first obtain authorization of consent from a registered medical practitioner, valid for testing records and treatment. The adolescent must cover the survey.

Employee Health & Safety

Building a Culture Where Zero Harm is the Only Goal

Involving **100%** employees working with safety responsibilities is part of our operations. We maintain a robust Environmental Health and Safety Management System supported by the OSHA Act and International Labour Organization (ILO) standards. Dedicated safety officers at every facility ensure strict compliance through continuous risk assessments, emergency preparedness and comprehensive training programs.

Key Training Programs

1. Training OSHA, Chemical Handling, Hazard Management	6. Emergency Assessment and action
2. Personal Protective Equipment & Machine Safety Guard (PPE)	7. HSE (HSE) Awareness Training
3. Occupational Health & Safety	8. Environmental & Environmental Chemical Awareness Training
4. Safe Machine Operation	9. Incident & Injury Prevention Assessment Training
5. Electrical Safety	10. First Aid
6. Duty & Responsibility Training all Worker	11. Risk Assessment
7. Emergency Procedures & Evacuation Routes & Response Position & General Evacuation	12. Training on Injury

Fire Prevention, Detection & Protection

Our operations are fully fire safety protected with:

Fire Hydrant System

Fire Alarm

Fire Safety Plan

Smoke Detector

Automatic Fire Alarm System

Fire Extinguishers

Emergency Response

100% Employees have Training from FICCO

Monthly Fire Drill and Weekly Safety Fire

OSHA from FICCO

Emergency Response Plan

Emergency Evacuation with backup system

Performance Highlights (2023-2024)

We achieved excellent progress in safety performance.

Key Performance Indicators	2023	2024	2025
Total Person-Hours Worked	1,200,000	1,350,000	1,500,000
Lost Time Injury Frequency Rate (LTIFR)	0.5	0.3	0.2
Total recordable work-related injuries	20	15	10
High-potential employee work-related injury or illness incidence rate	0.1	0.05	0.02
Lost Days	10	8	5

Capability Building

Growing Together Through Learning and Empowerment

We focus on investing in the full potential of every employee. From 2023 to 2025, we significantly scaled our learning initiatives, with training hours increased by 80%, and the average training score per employee (0-100), with highest performance score achieved 95%.

Advancing Gender Equality & Inclusion Empowering Women Through the P.A.C.E. Program

A shining example of this commitment is our partnership with [P.A.C.E.](#), our [Partner for Advancing Gender Equality](#), designed to support technical skills, P.A.C.E. fosters confidence, leadership, and skills among our women workers. In 2023 alone, we trained 104 women, and during the reporting period, nearly 1,000 women successfully completed our modules through projects spanning 48 weeks. Through focused training in communication, problem-solving, leadership, and team synergy, these women are now better equipped to advance in their careers and contribute more meaningfully both at work and in their communities.

WE Women: Embedding Equality into Our DNA

By working with [WE](#), we are proactively empowering the [WE](#) Women program to drive our social goals. This initiative restructures our organizational & company gender equality strategy through management systems, business decisions, and long-term strategy.

By focusing on supplier performance, leadership development, and workplace culture, [WE](#) Women ensures that gender equality is more business sustainable and sustainable part of business success. Our key focus areas include:

- Embedding gender equality into procurement decisions and business strategy
- Creating clear pathways for women's leadership and career progression
- Building culture of inclusion, respect, and equal opportunity for all

Through [WE Women](#), we are transforming procurement from a transactional role to a structured, strategic reality.

Mothers @Work: Supporting Working Mothers with Care and Dignity

We understand that supporting women means starting by them at every stage of life — especially during motherhood. Under the [Mother's Work Program](#), our [Mothers @Work](#) initiative creates a family-friendly workplace atmosphere and treating mothers not just as mothers but as individuals with health & careers.

The program focuses on providing guidance, resources, and flexible work arrangements. These practical measures are supported by awareness programs on maternal health, nutrition, and breastfeeding.

Our focus remains on:

- Ensuring safe and healthy working conditions for pregnant and new mothers
- Promoting breastfeeding, nutrition, and maternal well-being
- Providing robust support systems including daycare and flexible work arrangements

By caring for working mothers, we foster a team that thrives on productivity and nurturing parents, fostering greater loyalty, retention, and productivity.

OHSMS Implementation

Since its inception in 2023, the implementation of the Occupational Health and Safety Management System reflects our commitment to the [International Labour Organization's](#) eight fundamental principles, enabling globally sourced identification, risk assessment, incident investigation, and continuous improvement in workplace safety.

55. Implementation Programs

We made significant progress in operational discipline through the 55 Implementation Program, provided to workers and other stakeholders. The initiative began with the formation of the 55 Core Committee in February 2025, followed by implementation, and the final progress report published on 1 March 2025.

Complementing the efforts are also national targeted awareness training on Risk-Based Management with TSM (K3 Trade Fair-PA Ltd), together, these activities strengthened workplace organization, housekeeping, discipline, and overall safety awareness and facilities.

Health & Safety Awareness Initiatives

To build internal training capacity, we successfully completed the Training of Trainers (TOT) program with external help, preparing all participants to disseminate knowledge throughout the organization.

Additionally, the 3M (360-DEGREE TSE) Program, provided by 360-DEGREE Consulting Limited and conducted from 1 to 11 November 2025, trained participants on internal audits, further strengthening our skills to sustain high-quality learning initiatives.

Fire Safety and Right to Safe Conditions

We enhanced emergency preparedness through the 4th Firefighting Refresher Training conducted by Fire Safety experts, focusing on fire prevention, response techniques, and our first-aid fire safety working procedures.

Grievance Mechanism Training

In collaboration with Better Work, we delivered Grievance Mechanism Training to new personnel, strengthening our internal systems for timely and fair resolution of worker concerns.

Green Skills Training

Recognizing our commitment to environmental stewardship, we provided Green Skills Training to workers, equipping them with practical knowledge and sustainable practices for responsible workplace behavior.

H&P OMI SMIS Program: Strengthening Safety Management Systems

In partnership with ILO and IFC, we implemented the H&P OMI Safety Management System (SMIS) Program – an integrated 90-day initiative. Beginning with ShreeFlint in June 2020, the program included initial assessment, training implementation sessions, factory support visits, and monitoring follow-ups by March 2021. A total of 18 persons were trained at SMIS training and monitoring workshops, reinforcing our long-term safety culture and risk management capabilities.

H&P Respect Program: Reimagining Industry to Support Equality

In partnership with ILO, the H&P Respect Program marked a significant milestone in building a respectful workplace workplace. The program culminated the first training session on 15 November 2020 for the first session in October 2020, concluding activities for the Respect and Contribution on 17 November 2020.

A total of 100+ employees were trained, including 10 Worker Representatives and 10 Management Representatives. By bringing together workers and management as Change-makers, the H&P Respect Program has helped to build a culture of mutual respect, non-discrimination, and zero tolerance for harassment across the organization.

Prevention of Gender-Based Violence

Initiated under the ILO Bangladesh Gender-based Violence (GBV) Initiative, our Prevention of Gender-Based Violence program established our first Gender-Based Violence (GBV) Prevention Committee in the workplace. Through structured training provided to our employees, the initiative raises awareness, promotes respectful behavior, encourages workers with the tools to maintain a safe, dignified, and inclusive environment. The program actively engages all workers in creating a workplace where everyone feels protected, respected, and valued.

Respect Program

In China H&P Group, we are committed to building a workplace grounded in mutual respect and dignity. In partnership with ILO, we implemented the Respect Program, which focuses on promoting respect in workplace communications. Through structured training sessions delivered to our employees, the program instilled professional conduct, fair treatment, and collaboration with individual team members and managers. The initiative actively engages all staff and strengthens the foundation of a positive and inclusive work environment.

Social Dialogue in Bangladesh

In partnership with ILO Bangladesh, we implemented the Social Dialogue in Bangladesh Initiative under the wider ILO. Through structured training delivered to our employees, the program aims to improve industrial relations, reduce labor unrest, and improve workers by fostering constructive dialogue between workers' management and workers. In addition, the dialogue also incorporates "green" environmentally focused elements, taking social harmony into sustainability goals.

Employee Wellbeing & Benefits

Supporting Maternal and Child Health

We place special emphasis on maternal and child health programs, serving mothers and young children. Through our facilities, we provide nutrition support for pregnant women, lactating mothers, and infants below 24 months. These programs include regular nutritional assessments, tailored dietary advice, health screenings, breastfeeding, and early childhood development. Additionally, we organize training, educational activities, health and reproductive education and essential materials for children in our daycare centers. Medical facilities facilitate ongoing clinical consultations, laboratory tests, medicines, and related expenses with medication-free treatment. We're committed to supporting mothers and their families.

Financial Relief and Everyday Support

To ease the economic burden on our employees, we awarded Fair Price Super/Pastor/Head of all facilities. Employees could purchase daily necessities at affordable prices, offering savings of 10-20% compared to retail markets. This program included reduced facility management expenses, transportation and improved overall financial stability.

Celebrating Life's Milestones and Building Community

We believe that joy and togetherness strengthen workplace culture. In 2023, we organized festive and family-oriented events including:

Birthday Celebrations for our Babies
Fair Price Super (Super Shop)
Pregnancy/Maternal/Child Care Services
Lactating Mothers' Support
Employee Birthday Celebrations
Monthly Drive for Children's Health
Annual Festival/Events (Festive)

These events fostered a sense of community and well-being among our employees and their families. We're committed to celebrating life's milestones and building a supportive workplace culture.

Compensation Framework

At **Green Island**, we believe in fair, competitive, employment-compensation system that reflects our commitment to equity and respect for workers' rights. In alignment with the Minimum Wages Declaration 2023, our employees, including contractual workers, receive wages that meet or exceed regional living wage standards. We provide basic salary-increments and provide a range of benefits to support employees' wellbeing. These include, but are not limited to, Performance, Efficiency, Festival and attendance bonuses, night allowance, maternity support, medical and dental care, leave matters and statutory provisions like salary advances, loans, service benefits, and provident fund members.

Diversity & Inclusion

At **Green Island**, we believe our greatest strength lies in the differences, perspectives, and experiences of our teams. From our roots in the 1980s to becoming one of Bangladesh's leading apparel manufacturers, we have always valued inclusiveness and diversity. Indeed, the very fabric of our business is diverse. Our approach is fundamental to Bangladesh's legal framework, including the Bangladesh Labour Act 2006 (as amended in 2018), which prohibits discrimination on grounds of gender, disability, or other prohibited characteristics, mandates equality for work of equal value, and requires effective grievance redressal systems.

Our Commitment to Diversity and Equal Opportunity

Diversity and inclusiveness are at the heart of our people strategy. We have continuously made steady progress in reducing gender gap, with the number of female employees increasing by 64% over the reporting period. We also actively promote workplace inclusivity by employing 35 differently-abled individuals across our operations.

Zero Tolerance for Discrimination

We maintain a strict zero-tolerance policy toward any form of discrimination, harassment, or unfair treatment. In line with the Bangladesh Labour Act provisions on prevention of sexual harassment, gender-based violence, and the mandatory establishment of workplace harassment committees (with regular member representation), we have established clear, confidential, and accessible grievance mechanisms.

During the reporting period, we received no incidents of discrimination, any concerns raised are investigated promptly, fairly, and are fully confidential, followed by appropriate corrective actions where required. Regular training about Code of Conduct, Harassment, and Grievance ensures that every employee understands, values, and empowers.

Supply Chain Social & Environmental Assessment

Responsible Sourcing: Ensuring Integrity Across Our Supply Chain

At **Green Island**, we recognize that sustainable business extends beyond our own operations to the entire value chain. We are committed to responsible sourcing by systematically assessing and monitoring our suppliers on both social and environmental criteria. Through robust policies, regular follow-ups, and collaborations, we work to prevent and mitigate negative impacts while promoting ethical practices, human rights, and environmental stewardship across our supply chain partners.

Social Assessment and Performance

During reporting period, no follow-up or non-compliance issues identified in previous assessments and externally-verified independent report of 2021.

Economic Sustainability

From performance to resilience

Economic Resilience

As the world increasingly looks to the U.S. for leadership in education and science, business, and innovation, challenges also opportunities arise to spread good mathematics. Our Center affects our world beyond borders, and a particular commitment to sustainable growth, innovation, and job creation makes mathematics an integral, interconnected, and innovative.

Sustaining the principles of the Global Reporting Initiative (GRI) standards, we are proud to present independent ratings by the Global Infrastructure Anti-Corruption Centre (GIACC) by its flag team, external auditors, and dedication to responsible economic development.

1000

Model Year	Revenue (USD)	Progress%
FY 2022-2023	10,240,000,000	100%
FY 2023-2024	10,000,000,000	100%
FY 2024-2025	10,170,000,000	100%

Our Global Footprint

Our marketing strategy, primarily based on referrals, will be largely off-camera. We are currently expanding in Asia, Latin America, and Africa. For more information on our business opportunities, please visit www.fox.com. For business opportunities, please visit www.fox.com. For more information on our business opportunities, please visit www.fox.com.

Creating Shared Value

Table 1.100 Group understands and defines economic value by broadening the self-fulfilled development of stakeholder contributions.

Through legal institutions, we support national levels, citizens, teachers, and social welfare for underprivileged children, teenagers, mothers, community organizations, employees, former staff, and social welfare laborers.

Key activities during the reporting period: institutional security support programs, educational assistance via partnership with JICA Foundation and local partners, medical assistance and community education. These contributions help improve quality of life, strengthen social resilience, and foster long-term community engagement in the construction of a new society.

Responsible Tax Contribution

Table 1.101 Group is Committed to the highest standards of transparency and responsible tax practices. We view the timely and voluntary payment of taxes as a core element of our contribution to the economic and social development of Bangladesh.

Over the past three fiscal years, our tax contributions have shown consistent and healthy growth. This growth reflects strong business performance, strong operational transparency, and increasing adherence to high governance standards.

We recognize not merely as a legal obligation, but as a meaningful way to support national progress, throughout Bangladesh, we pay taxes transparently and proactively in education, health, and community development.

FY	Tax Paid (BDT)	Payment Percentage (%)
FY 2022-2023	17,000,000	100%
FY 2021-2022	15,000,000	88%
FY 2020-2021	14,000,000	82%

Focused on Impact Committed to Progress

Building on the progress achieved in 2023, we remain focused on achieving sustainable growth and creating long-term value for our stakeholders, communities, and the environment.

This report highlights the actions and achievements that continue to shape our sustainability agenda. It outlines performance metrics, it reflects the dedication, innovation, and collaboration that drive meaningful solutions across our business.

At Xerox, **purposeful sustainability** is embedded in the way we operate, make decisions, and plan for the future. Through responsible business practices and continuous improvement, we are strengthening our contributions across resilience, inclusion, and customer value.

We thank our employees, partners, customers, and communities for their continued support and shared commitment to this vision.
